

JESTIN GIGI

Pune, Maharashtra | +91 9769264812 | jestingigi@gmail.com | [Portfolio](#) | [LinkedIn](#) | [GitHub](#)

PROFILE SUMMARY

DevOps Engineer with 3+ years of experience managing production infrastructure on AWS (EKS, RDS, EC2, IoT Core) and driving observability through Grafana, Prometheus, and Terraform-based automation. Background spans SRE operations, DevOps tooling (Gitlab CI, Jenkins, Docker, SonarQube, Artifactory), and security fundamentals from an early VAPT internship. Proven track record of reducing incident resolution overhead, automating repetitive operational work, and improving reliability across microservices and industrial automation environments.

CORE SKILLS

Languages & Scripting: Python, Bash Scripting

Cloud (AWS): EC2, EKS, IAM, S3, Route53, VPN, RDS, CloudWatch, IoT Core, Security Groups

IaC & CI/CD: Terraform, Jenkins, GitLab CI/CD, Docker, JFrog Artifactory, Harbor, SonarQube

Observability & Monitoring: Grafana, Prometheus, CloudWatch, k9s, EC2 Monitoring

Databases: RDS, PostgreSQL

Networking & Messaging: Networking Fundamentals, VPN, Keycloak, RabbitMQ

Tools & Collaboration: Jira, Git, GitLab, GitHub Copilot, Rovo, Confluence

Operating Systems: Linux

Practices: On-call Ticketing, L1-L3 Debugging, Root Cause Analysis, Web Console Debugging, Security Tooling

CORE COMPETENCIES

Cloud Infrastructure: Cloud Architecture Design, High Availability Systems, Auto Scaling, Load Balancing

Containerization & Orchestration: Container Lifecycle Management, Cluster Management, Service Discovery

Observability & Monitoring: Metrics Monitoring, Log Aggregation, Distributed Tracing, Performance tuning

Automation & Scripting: Operational Automation, System Automation, Task Scheduling, Infrastructure mgmt.

Incident Management: Incident Response, On-call Operations, Postmortem Analysis, Disaster Recovery

WORK EXPERIENCE

SRE & DevOps Engineer

June 2024 - Present

HMS Networks India Pvt Ltd | Pune, Maharashtra

- Resolved 10+ customer reported production incidents per week across 15+ microservices, using Grafana log drill-down, k9s logs, RDS database queries, and Python+Bash automation achieving a 75% resolution rate.
- Built Grafana dashboards and alerting rules for release managers and production infrastructure against defined SLO/SLA targets (99.8%/99.6%), improving observability and reducing time to detect for critical issues.
- Troubleshoot production issues across 200+ Gateways using device shadows and job status to diagnose connectivity and command delivery failure.
- Led weekly production and pre-production release cycles using GitOps practices(Flux CD / Gitlab CI), coordinating deployments across multiple microservices with minimal downtime.
- Managed Ewon Cloud infrastructure through Terraform, enabling repeatable, version-controlled infrastructure provisioning and reducing manual configuration.
- Participate in 24/7 on-call rotations using Opgenie and Jira Service Desk triaging critical production alerts, performing root cause analyses driving incident response workflows.

- Designed and Operationalized a structured disaster recovery runbook for restoring multi-tier cloud services from AWS Backup vaults into Amazon Aurora RDS clusters.

DevOps Engineer (GET)

August 2023 - May 2024

Redlion Controls Pvt Ltd | Pune, Maharashtra

- Owned and maintained 50+ Jenkins CI/CD pipelines supporting firmware builds and release processes for 5+ industrial automation products.
- Built production-ready Docker-based development environments for repeatable firmware compilation and delivery of validated hex artifacts.
- Integrated SonarQube analysis into C++ firmware pipelines to detect issues earlier, enforce coding standards, and reduce manual review dependency.
- Served as primary owner for Jenkins and JFrog Artifactory infrastructure and completed structured knowledge transfer to the incoming DevOps lead.

Junior Security Intern

January 2022 - June 2022

Hack X Security | Pune, Maharashtra

- Collaborated effectively to develop and deliver engaging social media content, resulting in a notable 20% increase in customer engagement.
- Performed vulnerability assessments and penetration tests on 2+ client web applications, identifying issues across SQLi, command injection, CORs and documenting them with severity ratings and remediation guidance.
- Automated reconnaissance and testing with Sqlmap, Commix, ParamSpider, Nmap, and Burp Suite, aligned to the OWASP Top 10.
- Built a Bash tool that used user inputted API keys and validates whether they are live, flagging 2+ active leaks and cutting manual review time by 70%.

KEY PROJECTS

Gitlab CI/CD Monitoring Infrastructure

- Built a production-ready Gitlab CI/CD observability infrastructure using Gitlab Exporter to record pipeline metrics into Clickhouse for analytics.
- Designed custom Grafana Dashboards for visualizing pipeline health and job failure trends.
- Configured CloudWatch Alarms and SNS notification for proactive infrastructure monitoring.

On-Prem SonarQube to SonarQube Cloud Migration

- Migrated SonarQube analysis for the various HMS portfolios from an on-prem SonarQube instance to SonarQube Cloud.
- Saved 16+ engineer-hours by automating 144 SonarQube Cloud project setups with Bash + the SonarQube API, and Selenium for the binding step the API didn't support.

EDUCATION

Bachelor of Technology, Computer Science & Engineering

2020 - 2024

Dr. Vishwanath Karad MIT World Peace University (MIT-WPU)

CGPA: 9.2/10

CERTIFICATIONS & COURSES

- GitLab CI/CD: Pipelines, CI/CD and DevOps for Beginners - Udemy
- Introduction to Linux (LFS101) - Linux Foundation
